

## Step-by-step instructions to create a new database in MySQL Workbench:

**Before You Start:** Make **MySQL Server** is running.

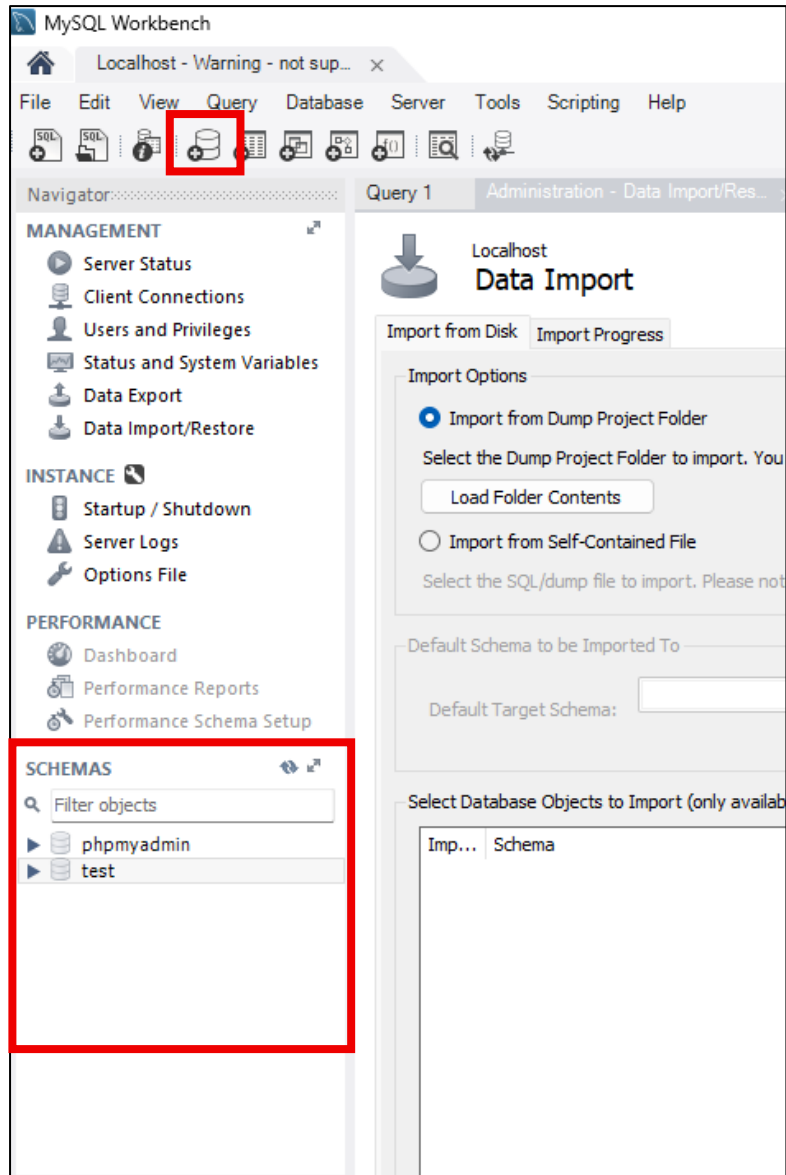

## Step 1: Connect to MySQL Server

Launch MySQL Workbench, then click your saved connection tile (e.g., Localhost) to open a session.

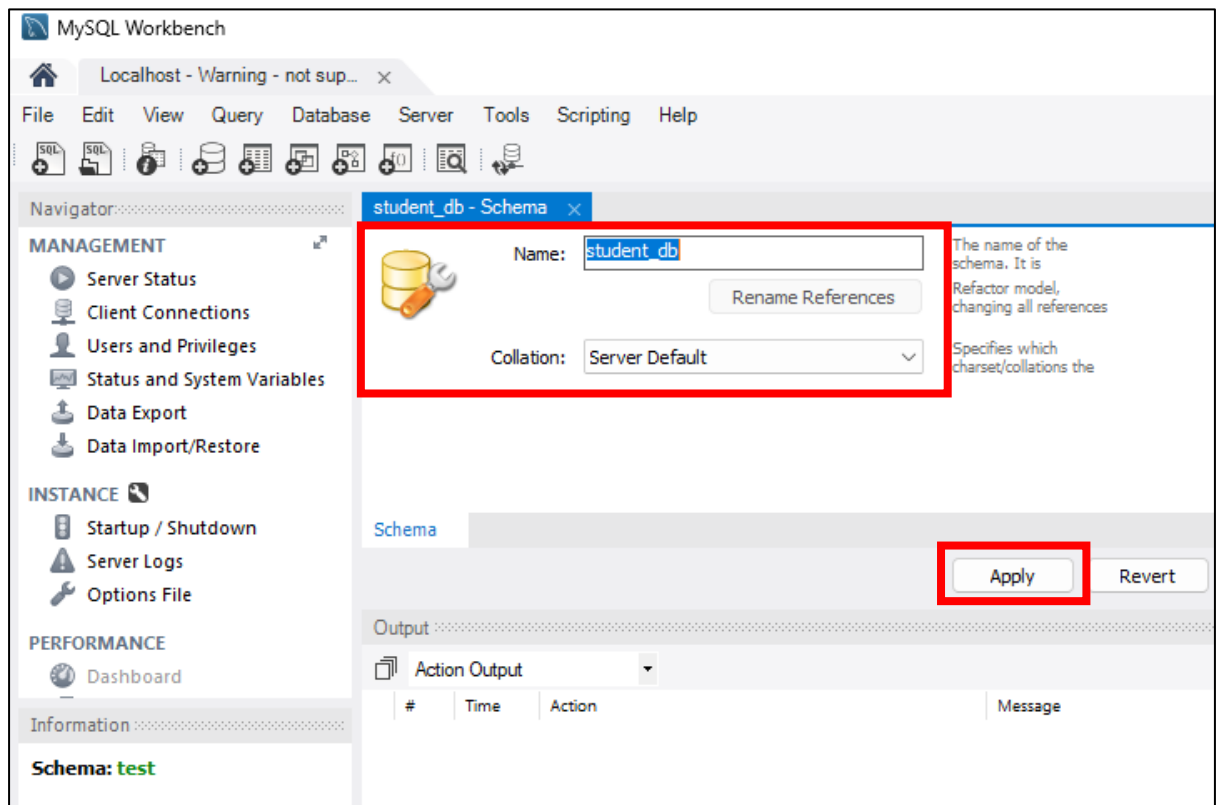

## Step 2: Open "Create Schema" Dialog

Once connected, locate the SCHEMAS panel. Click the cylinder + icon to open the "Create New Schema" dialog.

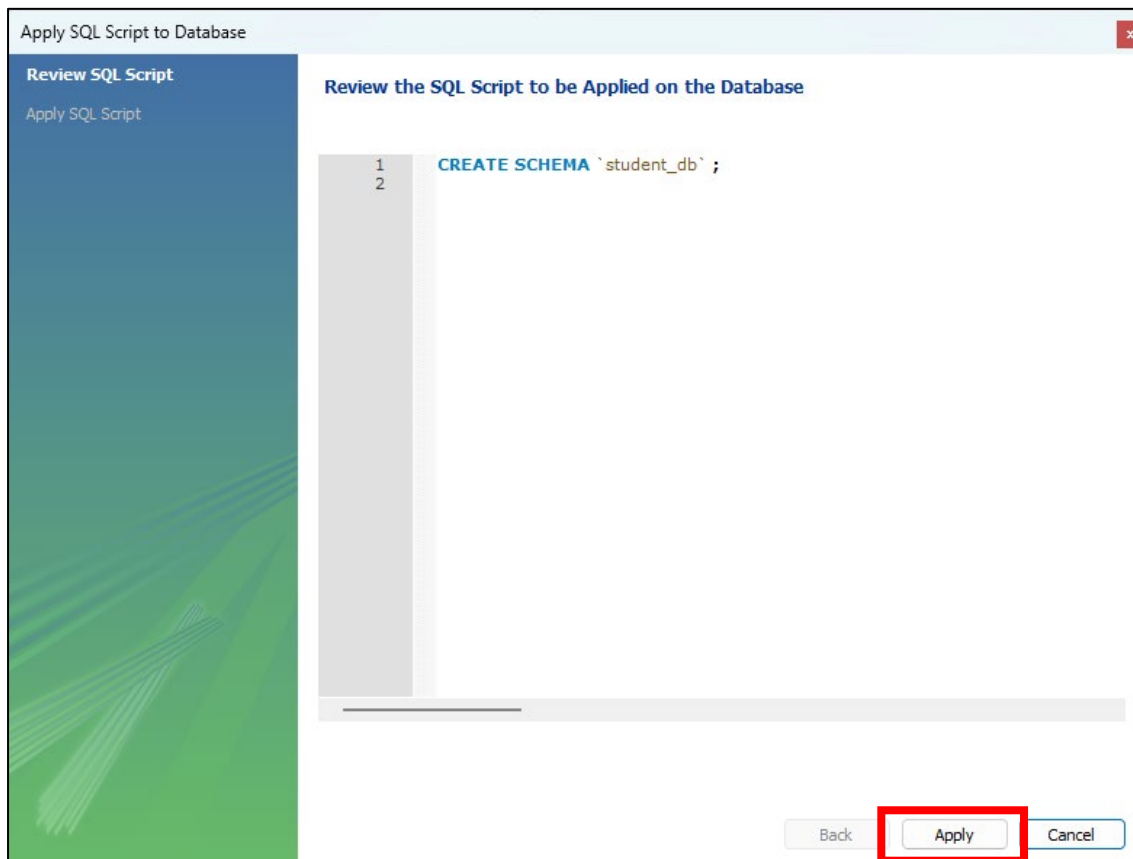

### Step 3: Name and Create the Schema

- Schema Name: Enter your desired name (e.g., student\_db)
- Leave other options as default
- Click **Apply**

## Step 4: Review and Confirm SQL

Workbench will generate SQL like:

Click **Apply** to execute, then **Finish** when done.

## Step 5: Refresh Schema List

Right-click in the **SCHEMAS** panel and choose **Refresh**. Your new schema should appear in the list.
